

## Calculation of Estimated Reduced Property Taxes for Properties Subject to Historical Property Contracts

Current Property Owners: Michael and Sabrina Blickenstaff

Upon approval of a historical property contract, the county assessor determines the reasonable expected yield by analyzing rental income of similar properties in the area or, if available, what the property would yield under prudent management. Reasonable expected yield for income-producing property is based on rents actually received and typical rents received for similar property in similar use, less maintenance and operating expenses.

The Mills Act capitalization rate is calculated by adding four component percentages including:

- An interest rate based on the Federal Home Loan Bank rate (as published by State Board of Equalization) on conventional mortgages (6.56% for 2026)
- The historical property risk (4% for owner-occupied single-family dwellings)
- 

A percentage equal to the reciprocal of the remaining life of the structure. The typical remaining life for a wood frame building is 20 years ( $1/20 = 5\%$ ) and for masonry building is 50 years ( $1/50 = 2\%$ ); however, typical remaining life for most buildings is 50 years ( $1/50 = 2\%$ ) if adequate care is applied.

- The percentage of the tax rate times the assessment ratio (typically 1%).

The Capitalization Rate is used to calculate the estimated annual savings to the homeowner and estimated annual cost to the City, as noted in the table below:

### Existing Property Value Calculations

<b>\$1,302,171</b>	County Assessed Value
\$13,022	Property tax (1% of value)
