THE CITY COUNCIL OF THE CITY OF CLAREMONT DOES ORDAIN AS FOLLOWS:

SECTION 1. Authority. The City Council enacts this Ordinance under the authority granted to the City as follows:

- A. California Government Code Section 50022.1 et seq. authorizes the City to adopt by reference the California Building Standards Code and authorizes the City to adopt other codes by reference.
- B. California Health & Safety Code Section 17958.7 and 18941.5 authorize the City to adopt the California Building Standards Code with modifications determined to be reasonably necessary because of local climatic, geological, or topographical conditions.

SECTION 2. Findings. To the extent that changes and modifications to the 2025 California Building Standards Code in this ordinance are deemed more restrictive than the standards contained in the 2025 California Building Standards Code, thus requiring that findings be made pertaining to local climactic, geological, or topographical conditions to justify such modifications, the City Council hereby finds and determines as follows:

- A. The region receives a relatively low amount of precipitation and has a very low humidity level and extremely high temperatures. These climatic conditions cause extreme drying of vegetation and common building materials. Frequent periods of drought and low humidity add to the fire danger. This predisposes the area to large destructive fires (conflagration).
 - (Applicable to Amendments to Building Code Sections 1505.1.2, Table 1505.1, Residential Code Sections R902.1.2)
- B. Extremely strong winds in the region, commonly referred to as Santa Ana winds, result in extensive damage such as downed trees, utility poles, utility circuits, and utility service lines. These conditions cause fires, impairment of emergency apparatus access, and delays in response time of fire suppression equipment and other emergency vehicles.
 - (Applicable to Amendments to Building Code Sections 1505.1.2, Table 1505.1, 903.2, Residential Code Sections R902.1.3)
- C. Wildland fire is a natural component of Southern Californian ecology. Wildland fire behavior is strongly influenced by vegetation type, terrain, and weather. Hillside areas also make appealing development areas for single-family dwellings. The combination of these two factors significantly increases the risk of damage to property and life in very high fire hazard severity zones.

(Applicable to Amendments to Building Code Sections 1505.1.2, Table 1505.1, 903.2, Residential Code Sections R902.1.3)

D. The Claremont hillsides consist of chaparral, coastal sage scrub, oak woodland, grasses, and riparian vegetation types. The topography of the hillsides consists mostly of steeper slopes. The solar aspect of the Claremont hillside is predominantly southwest to southeast, which affects the flammability of the natural vegetation by reducing the moisture content. Wind is a particularly important element affecting fire behavior since most major wildfires in Southern California occur during Santa Ana wind conditions. The Santa Ana winds, which are associated with low humidity, can affect the flammability of vegetation by reducing moisture, preheating plants, and spreading the flames ahead of the fire. The Claremont hillside topography can channel dry airflow off the valley flow and into the canyons, creating erratic winds and climatic conditions favorable to the spread of wildfires.

(Applicable to Amendments to Building Code Sections 1505.1.2, Table 1505.1, 903.2, Residential Code Sections R902.1.3)

E. The topography of the Claremont hills present problems in delivery of emergency services, including fire protection. Hilly terrain has narrow, winding roads with little circulation, preventing rapid access and orderly evacuation. Much of these hills are covered with highly non-fire-resistive natural vegetation. In addition to access and evacuation problems, the terrain makes delivery of water extremely difficult. Some hill areas are served by water pump systems subject to failure in fire, high winds, earthquake, and other power failure situations.

(Applicable to Amendments to Building Code Sections 903.2)

F. Within the City there are three earthquake faults. In the event of a severe earthquake, these faults present the potential for catastrophic damage, including fire, damage to roadways, and other impairments of emergency apparatus access.

(Applicable to Amendments to Building Code Sections 1505.1.2, 903.2, Residential Code Sections R902.1.3)

G. Development has occurred and continues to occur which has resulted in severe traffic congestion during peak business hours, weekends, and holidays, thereby affecting response times for emergency services.

(Applicable to Amendments to Building Code Sections 1505.1.2, 903.2, Residential Code Sections R902.1.3)

H. Automatic fire protection systems are the single greatest means of reducing the severity of structural fires and studies show that losses due to fire in un-sprinklered buildings are four times greater than such losses in sprinklered buildings.

(Applicable to Amendments to Building Code Sections 903.2)

I. Data reveals that no single fire causing three or more fatalities has occurred in sprinklered residential structures, including houses, apartments, hotels, motels, and dormitories.

(Applicable to Amendments to Building Code Section 903.2)

J. An extreme and unusual fire hazard exists in the hillsides and other areas of the City north of Base Line Road due to the presence of highly flammable vegetation, the region's dry climate and frequent hot, dry, Santa Ana winds, which can exceed 80 miles per hour.

(Applicable to Amendments to Building Code Sections 1505.1.2, Table 1505.1; 903.2, Residential Code Sections R902.1.3)

K. The city is located in an area which, due to its climate, geology, and topography, is highly susceptible to fires, strong winds, low precipitation, and seismic activity, making requirements necessary to ensure the city residential, commercial, and industrial building stock is designed, preserved, and maintained in such a condition as to protect the safety of the residents, thus justifying the imposition of requirements for more fireretardant roofs than are required elsewhere in California.

(Applicable to Amendments to Building Code Sections 1505.1.2, Table 1505.1, Residential Code Sections R902.1.3)

- L. Amendments to California Building Code Sections 105.2, 105.3, and 109.2 of Chapter 1; amendments to Appendix J; amendments to California Residential Code Sections R105.2, R105.3, R108.2, and R110.4 and amendments to California Electrical Code Sections 89.108.4.2 and 89.108.4.2.1 are necessary for administrative clarification, and do not modify a building standard pursuant to California Health & Safety Code Sections 17958, 17985.7, and/or 18941.5. These amendments establish administrative standards for the effective enforcement of the building standards in the City of Claremont.
- M. Amendments to the California Fire Code as set forth in the 2026 Los Angeles County Fire Code (Title 32, Los Angeles County Code) are justified based on the findings identified by the Los Angeles County Board of Supervisors.
